AppViewX

Identity Security for the AI-powered and Post-Quantum Enterprise

- Secure your enterprise for AI and quantum.
- Automate certificate management and PKI.
- Govern agent and machine IAM.

Agent Identity Security

Stop AI agents from privilege misuse.

Agent identity is the fastest growing and least governed attack surface. AppViewX Agent Identity Security addresses the risk associated with AI agents. It sees, governs, and stops rogue agents at the identity layer, so security teams get runtime preventions with deep contextual visibility across every agent, not just detection.

Keep every agent identity working for you, not against you.

Shadow AI Discovery and Governance

Build a unified registry of sanctioned and unsanctioned agents through platform-agnostic discovery, with a complete AIBOM of owners, users, credentials, MCPs, models, and skills, plus an access graph with real-time risk signals.

Agent Lifecycle Management

Manage every agent from deployment to decommissioning with automated workflows, ownership tracking, agent and MCP risk posture assessment, customizable AI risk profiles, and token usage and cost governance.

Privilege Access Security

Enforce least agency by risk-scoring every agent action against resource sensitivity in real time, with JIT privilege control, an MCP gateway, human-in-the-loop approvals, and a risk-triggered kill switch.

AI Agent Threat Response

Detect anomalous access, privilege escalation, and intent mismatches in real time. Integrated ITDR drives automated containment, with Shared Signals Framework (SSF) and SIEM integration for cross-platform response and forensic investigations.

Continuous Compliance

Continuously map agent posture to NIST AI RMF, EU AI Act, SOC 2, ISO/IEC 42001, OWASP Top 10 for LLM Applications, MITRE ATLAS, and more, with drift detection and audit-ready reporting.

AI Security Assistant

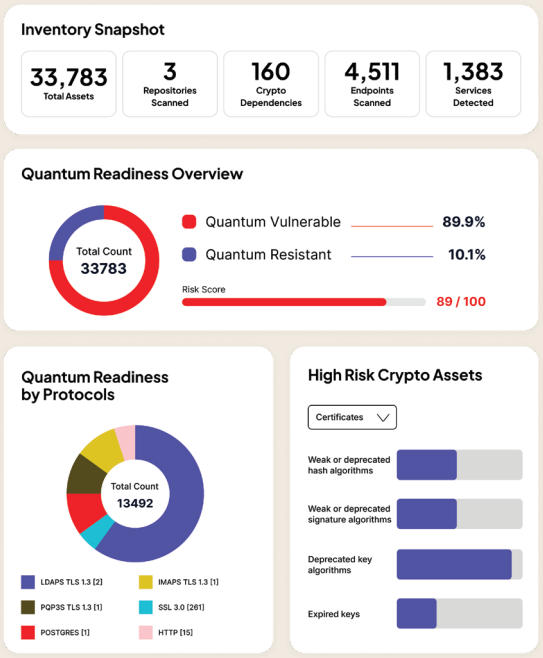

Guided investigations and remediation with an AI security assistant that summarizes alerts, explains agent risks, prioritizes compliance issues, and drives threat response from detection through resolution.

Quantum Trust Hub

Get quantum ready.

Turn quantum readiness from a one-time discovery exercise into continuous quantum posture management, with board-level proof of where you stand. AppViewX Quantum Trust Hub helps you see your crypto assets, prioritize your risk, remediate at scale, and prove your quantum readiness.

Your quantum migration, fully orchestrated.

Discovery and Inventory

Build a single, continuously updated crypto asset inventory across certificates, TLS configurations, cipher suites, and application code libraries with agentless-first discovery.

Cryptographic Bill of Materials (CBOM)

Generate an evolving inventory of algorithms, protocols, libraries, keys, and certificates that supports audit, remediation, and policy enforcement.

Assessment & Prioritization

Get quantum-readiness scoring of all your crypto assets based on business context and impact, not just algorithm type or key size, to help you prioritize what to fix first.

Guided PQC Migration

Build a phased migration plan with every remediation action and asset mapped to an owner. Automate re-issuance to PQC and hybrid certificates with a CLM and PQC-enabled enterprise PKI built into the same platform.

Governance & Enforcement

Define and apply custom policies across all your crypto assets and get a continuous snapshot of quantum resistance across your organization.

Organization Overview Dashboard

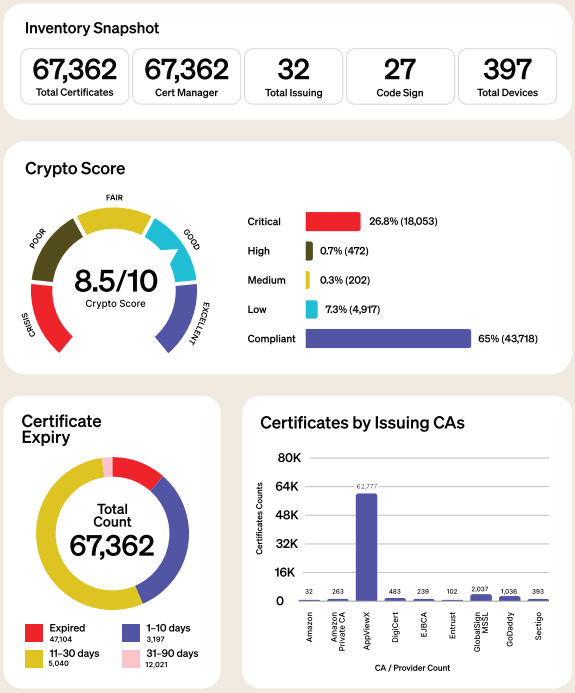

Give executives a real-time migration and quantum readiness dashboard with detailed drill-down reports to track progress across a defined quantum migration timeline.

CLM

Put CLM on auto.

Turn machine identity risk into operational resilience. AppViewX CLM sees every certificate, automates the end-to-end lifecycle, and prepares you for the 47-day TLS mandate. No CA lock-in required.

The leading CLM solution meets top-rated customer support.

Smart Discovery

Scan and discover all certificates across hybrid-cloud and multi-cloud infrastructures to reduce the risk of unmanaged, rogue, and non-compliant certificates.

AI Intelligence

Our native MCP server connects AI agents such as Claude and Copilot to AppViewX CLM for natural-language queries about certificate inventory, expiry status, and weak-algorithm risks.

End-to-End CLM Automation

Automate the full certificate lifecycle, from enrollment and installation to renewal, with ACME and policy-based workflows that keep pace as public TLS validity shrinks to 47 days.

Policy Compliance Engine

Define and enforce enterprise-wide PKI policies, including certificate validity periods and role-based access control, to stay aligned with CA/Browser Forum timelines. Automate reports and logs for audits and compliance validation.

Public and Private CA Management

Seamlessly integrate with public trust and private trust Certificate Authorities to centrally manage all certificate lifecycle processes.

Flexible Deployment

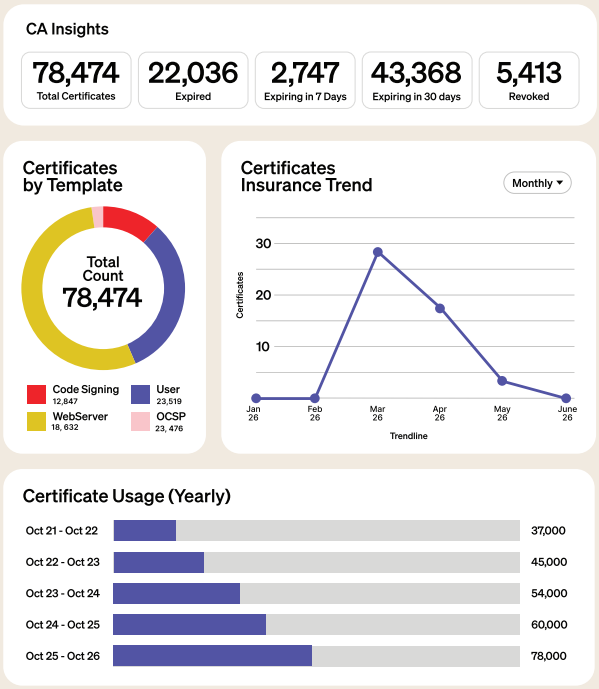

Deploy CLM securely on premises and in your private cloud, or put it to work as a fully-managed SaaS offering.

PKI

Scalable, secure, quantum-ready PKI.

Modernize your PKI by replacing legacy PKI with a crypto-agile, CLM-integrated platform. AppViewX PKI simplifies private certificate issuance, governance, and rotation at scale, so you can trade on-prem challenges and CA vendor lock-in for simplicity and agility.

Unlock what modern PKI can do today, and tomorrow.

Enterprise-Grade, Turnkey PKI

Set up CA hierarchies and provision CAs within minutes, while supporting current and future-ready security use cases across Mobile Device Management, VPN, Wi-Fi, IoT devices, and other PKI needs.

Seamless PKI Migration

Easily migrate from your legacy on-prem Microsoft CA to AppViewX PKI with a migration wizard that guides you through every step, reducing misconfigurations and ensuring business continuity.

PQC-Enabled Issuance

Our secure, quantum-ready PKI solution issues PQC-safe certificates with support for NIST-standardized PQC-safe algorithms, as well as hybrid composite certificates.

Robust and Secure CA Environment

Safeguard your CA keys with secure FIPS 140-2 Level 3 HSMs, or integrate with your own HSM. Minimize the risk of exposure with an air-gapped, offline Root CA for high-security environments.

Fully Integrated CLM Automation

Discover certificates, gain visibility, automate certificate lifecycles, and enforce PKI policies consistently across multi-cloud environments, network devices, DevOps, containers, and more.

Controlled Self-Service PKI

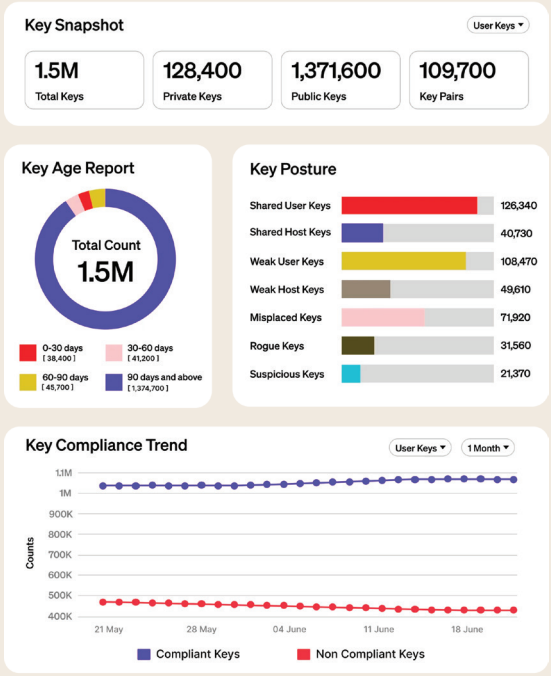

Enforce strong governance with M of N controls for secure, authorized access to all CA operations, while enabling secure self-service.

SSH

Your key to SSH management.

Get unmanaged SSH keys and certificates under secure, centralized control. AppViewX SSH finds every SSH identity, keeps it up to date, and controls how it's used, so privileged access stays aligned with people, roles, and systems.

See every key. Govern every login.

Complete SSH Discovery

Discover every SSH key and certificate across your infrastructure to eliminate security blind spots and stale spreadsheets.

Ownership and Access Mapping

Tie every SSH identity to an owner, account, and system to reduce the risk of unauthorized access and infrastructure exploitation.

Automated SSH Lifecycle Management

Automate SSH key and certificate generation, provisioning, rotation, and removal, so your teams stop chasing down keys and focus on higher-value work.

Adaptive Access Control

Automatically update SSH access as your people, roles, and systems change, so you scale your business without scaling your risk.

Unified Machine Identity Management

Manage SSH keys and TLS certificates with the same policies, dashboards, and audit trails for an integrated view of your total machine identity risk.

Policy-Driven Security Controls

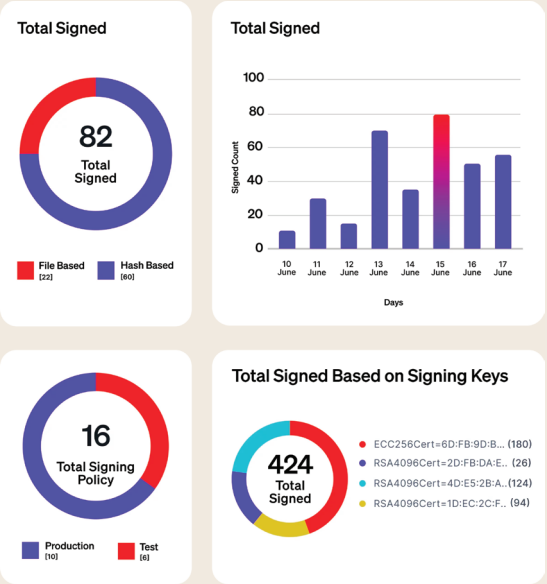

Secure weak keys and unmanaged access quickly with clear security controls for every SSH key and certificate.

Code Signing

Trust, built into every release.

Protect your software supply chain without slowing it down. AppViewX Code Signing secures your keys, enforces consistent signing policies across your CI/CD pipeline, and gives security and DevOps teams full visibility and control of every signing operation.

Lock down your keys. Power your software delivery.

Code Signing Visibility

Maintain a clear inventory of every code signing certificate and signing task across your teams and tools.

Signature Traceability

Trace every key and certificate back to the software it signs, and tie each signature to specific people, projects, and signing keys.

CI/CD Pipeline Integration

Sign from native signing tools, CI/CD pipelines, API workflows, or directly from the AppViewX console, replacing one-off signing requests and manual uploads.

Policy-Driven Signing Rules

Automate signing rules so they follow your teams, apps, and environments as they change, and reuse your existing certificate and key policies for consistent controls.

HSM-Backed Key Protection

Generate and store private keys in FIPS-certified HSMs to prevent compromise and ensure a strong root of trust.

Audit-Ready Signing Records

Keep precise records of who signed what, when, and with which key, so you stay audit-ready at all times.

About AppViewX

Identity security for an AI-powered, post-quantum world.

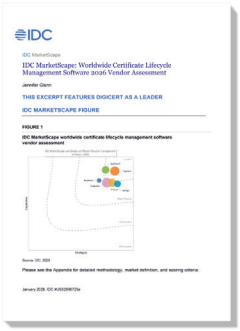

AppViewX delivers identity security for the AI-powered, post-quantum enterprise. Through a unified platform, AppViewX helps organizations govern machine and AI agent identities, own their root of trust, and build quantum resilience.

The AVX platform brings together Agent Identity Security, Quantum Trust Hub, CLM, PKI, SSH, and Code Signing, with 200+ integrations across enterprise environments. AppViewX was named a Leader in the 2026 IDC MarketScape for Worldwide Certificate Lifecycle Management Software and an Overall Leader in the 2025 KuppingerCole Leadership Compass for NHI.

Forrester Total Economic Impact

200+
Integrations

A market leader trusted by analysts and relied on by businesses.

AppViewX CLM was recognized as a leader in the 2026 IDC MarketScape for CLM for managing the full certificate lifecycle, from discovery to remediation, across any environment.

AppViewX named an Overall Leader, Product Leader, and Innovation Leader.

KuppingerCole has named AppViewX a leader in its 2025 NHI Report, citing our strength in certificate lifecycle management, crypto-resilience tracking, and closed-loop automation.
