

appviewX

WHAT IS THE APPVIEWX PLATFORM

- AppViewX is a modular, low-code platform that enables the automation and orchestration of network infrastructure using an intuitive, context-aware, visual workflow.
- Leveraging a vast library of pre-built tasks and playbooks, the platform enables Ops teams to quickly and easily translate business requirements into automation workflows that improve agility, enforce compliance, eliminate errors, and reduce cost.
- Our platform is closed-loop and state-aware, capable of verifying that intent has been achieved and providing actionable insights and automated remediation.
